

ALLIANCE Quality Beekeeper's Woodware is New Zealand's gourmet saw-mill, combining an ability to produce premium grade lumber, with the latest in woodworking technology. The result is **ULTRA HIVE** and **ULTRA FRAME**.

Based on the Hoffman frame and Langstroff hive, **ALLIANCE** has produced a quality that is setting standards in the beekeeping industry.

ALLIANCE has a history spanning four generations of timber merchants in New Zealand and services markets on both sides of the equator.

Grade Comparison

All hives are constructed using a sturdy 21.5 mm Radiata Pine, stiffened and hardened using some of the timber industries most advanced and proven seasoning techniques.

Premium -

completely free of defects. These are of the finest quality boxes available in the world!

Standard - these boxes contain only tight knots which guarantees the integrity of the hive while providing a cheaper alternative to Premium. There is always clearance between the knot and the edge of the body so there is no risk of edge cracking or fallout. These are a high performance/low cost hive.

Budget -

manufactured primarily for the packaging and transport of full frames.

*From \$7.50+GST

*Minimum quantities may apply

The high quality boxes come with a manufacturer guarantee for assembly and grade. Available in three grades to suit all budgets.

Type Options

Locked Corner - Sturdy dovetailing on four corners ensures a sturdy moisture proof fit. The locked corner box has the ability to be nailed from both directions on all corners.

Rebated - A popular cost effective alternative to the locked corner box, the rebated hive is easy to construct and has proven performance.
