- Output 6-8 tonnes per hr approx. (honey only)

Varroa Treatment

Apiguard®

- Up to 93% efficiency rate
- Works best in warmer temperatures
- Thymol based treatment. Thymol is a natural constituent found in thyme and some honeys such as thyme.
- Withdrawal period for honey: 0 days
- Easy to use foil trays, sold in carton of 10 x 50g trays.
2 trays per treatment per hive.
Also available in 3kg tubs, & 25g sachets
- Registered in over 36 countries worldwide including such countries as Germany, France, Italy, Switzerland, UK and USA.

Apiguard 25g Sachets

- ⇒ Easy to use
- ⇒ Better control over dosage
- ⇒ Ideal for both commercial and hobbyist beekeepers

Registered as an input for Organic Honey Production with AsureQuality New Zealand

Looking for a **TOTALLY ALTERNATIVE** treatment in the warmer months then try **APIGUARD®**

Resistance to Synthetic Pyrethroids has now been scientifically confirmed in a yard of beehives in Northland. This may not be an isolated instance. Please **ALTERNATE** your treatments!

Apistan®

The most effective Varroa Treatment
The most reliable Varroa Treatment
The standard against which other treatments are measured
Registered bee medication in over 50 countries worldwide

- Still a viable treatment option where there is no resistance
- Eliminates up to 100% of all mites in a hive
- Strips can be used in a hive for up to 8 weeks
- Will not give sub-lethal dose during 8 week period—controlled release combined with therapeutic dosage, used correctly will not promote resistance in mites.
- Proven efficiency from beginning to end of treatment period
- Apistan is that effective that it will resurrect hives that are collapsing from parasitic mite syndrome
- Economic to use only two strips per brood nest required
- Long shelf life, For current stock expiry date please enquire
- Apistan is not affected by removal from its packaging and can be repacked for use if necessary.
- Packed 10 to sealed foil pouch, 10 pouches per carton=100 strips
